

## PRESS REALESE

### TEMAVI™ present at NWFA 2009 and update

Notre-Dame-du-Mont-Carmel, April 2nd 2009

Following the introduction of the **TEMAVI™** system at **SURFACES 2009**, René St-Cyr ([www.rene-st-cyr.com](http://www.rene-st-cyr.com)) is proud to announce that it will be present at NWFA 2009 Trade Show this upcoming month in Long Beach, California, from April 28<sup>th</sup> to May 1st 2009. This Show is dedicated specifically to hardwood flooring manufacturers who want to promote their products to American wholesalers and retailers. Several enterprises from Canada will be present. For more information please visit [www.nwfa.org](http://www.nwfa.org).

**TEMAVI™** the new tongue and groove patent pending system has been created by Pierre Trudel from René St-Cyr to add more value to the industry which is mutating. It offers also the possibility to reduce significantly overall costs. The manufacturing process, which is also patent pending, allows the manufacturer to produce floorboard with a constant V shape from one floorboard to another. Therefore, René St-Cyr is able to manufacture a product of unbeatable quality.

These innovations are now available and are sold under a licence agreement. Distribution of this new technology have also been made with knives producers in the province of Quebec, such as DK-Spec from Saint-Nicolas and NAP-Gladu from Marieville, to resell the **TEMAVI™** system to their existing customers. They are also authorized to manufacture knives to future licensees which will switch to this new standard.

At the present time, Canadian and American manufacturers are currently in the process of evaluating the technology in order to acquire the **TEMAVI™**. The first licensees are expected in 2009 and will be announced in press releases.

With a constant increase of sales from Canada and the Unites States, René St-Cyr hopes to share its enthusiastic entrepreneurship and its vision of the industry to all North American hardwood flooring manufacturers who are interested in developing a new business model with the **TEMAVI™** tongue and groove system.
